CHINA, ITALY COOPERATE TO DEVELOP HYDROGEN ENERGY

SHANGHAI

It is expected that the energy center for 2010 Shanghai Expo will use molten carbonate fuel cell (MCFC) system jointly developed by experts from China and Italy. On August 3rd, China-Italy Hydrogen Energy Research Center formally started up, where experts from both China and Italy will carry through feasibility research on developing clean hydrogen energy. The project is planned to involve total research outlay about EUR one million. Every sub-project will set up working team built up by Chinese and Italian experts. Of the participants, the Chinese party consists of such units as Shanghai Huayi (Group) Company, Shanghai Electric Power Company Limited, Shanghai Jiaotong University, Tongji University.
