Coastal Inundation at Narrabeen Lagoon - Pittwater, Sydney

The report finds that the Narrabeen catchment (Pittwater region of Sydney) is likely to experience an increased frequency and intensity of storms and rainfall over the coming century. It analyses the benefits and costs of adaptation in response to risks of flood inundation around Narrabeen region. The report employs Monte Carlo analysis to generate probabilities of overall costs and benefits.

Technical Primer on Climate Change in the Philippines

This report discusses what is expected to happen in the Philippines as climate change progresses, and what appropriate courses of action must be taken to address its adverse effects. In the context

of the Philippines, the report addresses: (i) the direct effects of climate change, such as sea level rise, rainfall, public health; and (ii) responding to climate change, including adaptation, responsibility, strategic roles.

Adapting to Climate Change: A Call for U.S. Federal Leadership

This paper examines the role of U.S. federal government in reducing the climate vulnerability and strengthening the resilience of its economy. In so doing, it highlights many adaptation actions that have been taken in other nations (e.g., Australia, UK) as well as at the state level (e.g., California, Florida, Maryland) as potential models for the design of U.S. federal policy for adaptation.

Behavioural Adaptation and the Use of Environmental Controls

The paper investigates the possible linkage between the use of controls and the thermal comfort of occupants of apartments in Hyderabad, India. It analyses (1) the use of various personal environmental controls, (2) the behavioural adaptation methods undertaken, and (3) the hindrances faced by the occupants in their adaptation efforts.

Adapting Institutions to Climate Change - RCEP Report

The report explores the challenges facing institutions in adapting to climate change by examining existing institutional arrangements in UK for three exemplar areas: freshwater, biodiversity and nature conservation, and coastal zones. It sets out a framework of key components which it believes must be considered in order to help organisations build resilience to climate change and hence adaptive capacity.

ANU-Australia Conference: Healthy Climate, Planet and People

This conference (2010 Australian Academy of Science Fenner Conference on the Environment, 'Healthy Climate, Planet and People') will take place on June 23 and 24, 2010 in Canberra, Australia. It will address the health impacts of key climate change mitigation and adaptation strategies - in particular alternate approaches to human mobility, diet, housing, and energy generation.

[2010 Australian Academy of Science Fenner Conference on the Environment, 'Healthy Climate, Planet and People'](#), National Centre for Epidemiology & Population Health, the Australian National University, Canberra, Australia, June 23-24, 2010
