Adaptation in NE Arnhem Land, Australia - Indigenous Perspectives

This study attempts to improve understanding of factors important in the integration of indigenous peoples' perspectives in planning adaptation policy in North East Arnhem Land (Yolngu community) of Australia. It suggests that strategies and policies are needed to strengthen adaptive capacity of these communities to mitigate over-arching poverty and well-being issues, as well as respond to changes in climate.

[‘Strange changes’: Indigenous Perspectives of Climate Change and Adaptation in NE Arnhem Land \(Australia\)](#), L. Petheram et al., Global Environmental Change (article in press), 2010

Reducing the Climate Vulnerability of Coastal Communities - Samoa

The paper describes a project undertaken in Samoa (Samoa Infrastructure and Asset Management - SIAM) to reduce the vulnerability of Samoa's coastal infrastructure to climate-related hazards within the context of wider development challenges. The project developed a land-use and disaster management framework, which provided opportunities to explore how such a framework could be

used for other small island developing states (SIDS).

Road Map to Address the Belmont Challenge

The Belmont Challenge aims to deliver knowledge to support human action and adaptation to regional environmental change. This preliminary report assess the willingness, readiness and capacity of the international research community to respond to this Challenge and addresses issues related to the integration of weather, climate, ecosystem, energy, health, agriculture, engineering and social science research.

[Regional Environmental Change: Human Action and Adaptation - What Does It Take to Meet the Belmont Challenge?](#) International Council for Science (ICSU), Paris, August 2010 [946 KB, PDF]

Costs and Benefits of Adaptation in Developing Countries

The paper focuses on the economic issues at play in developing countries where climate adaptation is most needed, and where a host of other constraints have to be addressed at the same time. It develops a framework for analysing the costs and benefits of climate change adaptation in developing countries and the specific contexts in which these could be applied in future research work.

[Climate Change Adaptation in Developing Countries: Issues and Perspectives for Economic Analysis](#), Muyeye Chambwera and Jesper Stage, International Institute for Environment and Development (IIED), UK, 2010 [158 KB, PDF]

Trends in Climate Extremes Affecting Human Settlements

The identification of trends in climate extremes is vital if communities are to develop successful strategies to manage extreme events with changing frequencies or intensities. This review considers trends in climate extremes as determined from historical records and as projected from global climate models over the coming decades. It discusses the management strategies for some recent examples of extreme weather events and considers the future needs for various communities in addressing climate extremes.

5th International Community-Based Adaptation Conference

This conference will take place in Dhaka, Bangladesh from 24-31 March 2011. It is open to anyone interested in community-based adaptation including policymakers, non-governmental organisations,

research and policy institutes, academics, and practitioners with a particular focus on grassroots adaptation work. The paper submission deadline is 31 October 2010.
