Adaptive Management for Sea Level Rise - Gippsland Coast

This report presents the findings of Phase 2 of the Gippsland Climate Change Study. It outlines potential threats to assets and infrastructure in Gippsland and addresses issues like erosion and sand transport. The report describes, among other things, how the highly erodible Gippsland coast can be shaped by storms and other events.

[Climate Change, Sea Level Rise, and Coastal Subsidence along the Gippsland Coast](#), Final Report, Phase 2 of the Gippsland Climate Change Study, Gippsland Coastal Board, Bairnsdale, Victoria, Australia, July 2008 [9.40 MB, PDF]

Climate Challenge for California's Public Health Sector

The report reviews findings on how climate change could adversely affect public health in California and which adaptive measures can be undertaken to lessen these effects. It uses results from a survey of local public health officials to assess the current state of readiness of California's public health institutions to employ these adaptive measures.

Resilience Thinking and Pathways to Sustainability

This paper reports on a symposium which explores questions in relation to resilience including: what are the potentials and tensions in linking resilience thinking with an emphasis on social justice and reducing vulnerability; can resilience thinking be reconciled with constructivist perspectives and the politics of knowledge; and what are the broader implications of resilience discourses and their growing popularity.

A Reformed Clean Development Mechanism (CDM) - New Mechanisms for Sustainable Development

The paper explores how the CDM (Clean Development Mechanism) can be improved. It presents diverse insights on reforming and reinforcing the CDM in a post-2012 climate regime. The paper includes thirteen articles, which raise four key issues: sustainable development and equity; institutional reform; expansion of project categories; and scaling up mitigation.

Private Sector Activities in Disaster Risk Reduction

The paper provides new perspectives and insights into public-private partnerships based on disaster risk reduction work. It focuses on projects and initiatives that have shown innovative qualities and results. The paper highlights seventeen examples how the private sector engages in partnerships to reduce the risk of disaster.

Conference on Energy, Environment and Sustainable Development

Running from 24-26 June 2009 in Paris, France, this conference aims to bring together researchers, scientists, engineers, and scholar students to exchange and share their experiences, new ideas, and research results about various aspects of energy, environment, and sustainable development. Papers may be submitted by 28 February 2009.
