## Local Government Climate Change Adaptation Toolkit

This toolkit outlines an adaptive management process and provides a set of tools and exercises meant to assist councils. The tools range from simple and self-directed templates to more complex exercises. The toolkit suggests how and when to use each of the included tools as a complement to the adaptive management process.

## Strategies to Adapt to an Uncertain Climate Change

The paper discusses the role of uncertainty in adaptation strategies. It reviews practical adaptation strategies that can be implemented in anticipation. The paper calls for the development of innovative adaptation strategies able to cope with the uncertainty on future climates, and for more involvement

of climate information end-users.

## **California's City of San Rafael Releases Climate Action Plan**

The San Rafael climate change action plan contains a list of specific actions that the city intends to pursue including a number of action items for adaptation. It highlights how the various actions will be implemented and monitored, and identifies what additional actions can be taken at different scales of governance.

## **Climate Change and New York City's Energy Sector**

The paper reviews existing literature on the impacts of climate change on energy supply and demand, and identifies potential vulnerabilities and climate risks in New York City. The paper characterizes a range of potential management, infrastructure and policy adaptations that may be employed as part of the city and state's overall adaptation strategy.

Hammer and Lily Parshall, Draft Working Paper, Columbia University Center for Energy, Marine Transportation and Public Policy, South America, January 2009 [2.61 MB, PDF]

## **How Do Recent Population Trends Matter to Climate Change?**

The paper explores the relationship between population and climate change. It investigates how recent demographic trends matter to worldwide efforts to adapt to climate change. The paper is the first in a three part series that builds the knowledge base on the role of population dynamics in climate change mitigation and adaptation.

## **2010 Adaptation Conference - NCCARF and CSIRO**

This conference will take place from 29 June to 1 July 2010 at Gold Coast, Queensland, Australia. It will explore the contribution of adaptation science to planning and policy making, and how robust adaptation decision making can proceed in the face of uncertainty about climate change and its impacts. For more information, please go to the website below.

# Policy Forum: Preventing Climate Change Is Destined to Fail: What's Plan B?

Robert (Bob) M. Carter, Professor at James Cook University, Queensland writes, "Australia now needs a Plan B, which is the introduction of adaptive policies to deal with natural climate change, to replace the government's current expensive, inefficient and ineffectual plans to "prevent human-caused global warming". The failure of both Mr. Rudd and Mr. Turnbull to respond to this need by confronting ecosalvationist hysteria about imaginary global warming, and dealing sensibly also with the real threat of natural climate change, is now bidding fair to undermine their respective leadership positions."

[Preventing Climate Change Is Destined to Fail: What's Plan B?](#) Professor Robert (Bob) M. Carter, AdaptNet Policy Forum 09-01-P-Ad, 19 May 2009
