### **Planning for Climate Change - City of Port Phillip**

The study provides a detailed climate change risk assessment of St. Kilda in Victoria, Australia. It applies this assessment to assist with future planning for climate change in the City of Port Phillip. The report provides detailed mapping of 'at risk' areas and lists prioritized recommendations for the necessary next steps.

### **Adapting California's Water Management to Climate Change**

The paper finds that accelerated sea level rise and a reduced Sierra snowpack will pose significant challenges for water supply and flood management in California. It argues that water utilities in California have already begun to plan for these changes, but flood control agencies are lagging behind and face greater regulatory constraints.

## **Weather and Climate Services in Europe and Central Asia**

This paper reviews the status of weather and climate services in Europe and Central Asia (ECA). It undertakes some public surveys. The paper suggests a great disparity in the timeliness of severe weather warnings; a disparity that cannot be remedied without reinforcement of Europe and Central Asia's weakening weather services.

## **Costs and Benefits of DRR - India, Nepal, Pakistan**

The paper evaluates the costs and benefits of disaster risk reduction (DRR) across a series of case areas in India, Nepal and Pakistan. It focuses on water related disasters as a consequence of climate change. The paper finds that the benefits of investing in disaster risk management substantially exceed the costs.

## **Climate Change, Conflict and Forced Migration**

The report considers different factors (including climate change) that force migration. It highlights how forced migration can be triggered by environmental conflicts over already scarce resources of water and land. The report argues that the existing laws and possibilities should be further investigated to identify and address potential protection gaps.

## **International Energy Workshop 2009 - Venice, Italy**

This workshop will take place in Venice, Italy on June 17th-19th, 2009. It aims to gather experts in the field of energy and climate change economics. The workshop will include three plenary sessions; each one hosting two key-note talks, and approximately 80 presentations covering a wide array of topics. Papers may be submitted by March 01, 2009.
