DETERRENCE: [Topol, Yars ballistic missile launchers on combat patrol in 6 Russian regions](#), TASS Russian News Agency (4 February 2015)

Russia's Strategic Missile Force have put Topol and Yars road mobile ballistic missile launchers on combat patrols in six Russian regions. Mobility reduces their vulnerability to pre-emptive strike but may increase unreliability and inaccuracy. NATO is concerned about hybrid conventional-nuclear war at lower thresholds.

[North Korea could have 100 nuclear weapons by 2020: U.S. researchers, Japan Times \(25 February 2015\)](#)

World silence and ignorance ensures North Korea's nuclear arsenal will grow and possibly grow rapidly. Kim Jong-un recently chaired an enlarged meeting of the Korean Workers Party and an enlarged meeting of North Korea's Central Military Commission. Kim Jong-il rarely hosted such meetings, and it is unclear why Kim Jong-un and/or the Propaganda and Agitation Department - which determines the contents of North Korean news - feels a need to publicize these meetings. They likely also serve a signaling function in the lead up to U.S.-South Korea military exercise season. North Korea is on another outreach with its diplomatic and economic delegations going to Mongolia, Switzerland and Russia.

[GOVERNANCE AND CIVIL SOCIETY: China's first lawsuit for environmental damage goes to court, Asia News \(2 February 2015\)](#)

Environmental groups in China are bringing the first environmental damage lawsuit in the nation against four mining executives, a test of China's amended environmental protection legislation that came into effect in January. A positive step, while China's environment ministry has been reprimanded for corruption and pollution needs to be halved before environmental improvement is seen.

CLIMATE CHANGE ADAPTATION: [Climate change adaptation assets and group-based approaches: gendered perceptions from Bangladesh, Ethiopia, Mali, and Kenya](#), Noora Aberman et al., International Food Policy Research Institute (2015) [PDF, 766KB]

Gender norms often exclude women from participating in decision-making and rule setting at various levels. Men's and women's priorities for adaptation are shaped by the existing norms, roles, and responsibilities and how adaptation strategies build on, ameliorate, or distort these. Furthermore, evidence indicates that men and women may actually perceive climate risks differently - a fact that may further contribute to the development of gender-differentiated priorities for adaptation.

The Nautilus Peace and Security Weekly Report presents articles and full length reports each week in six categories: Austral security, nuclear deterrence, energy security, climate change and security, the DPRK, climate change adaptation and governance and civil society. Our team of contributors carefully select items that highlight the links between these themes and the three regions in which our offices are found — North America, Northeast Asia, and the Austral-Asia region.
