DPRK: [N. Korea pushes generational change in parliament](#), Chosun Ilbo (18 May 2011)

The North Korean Supreme People's Assembly has reportedly started a generational shift in its membership. The Worker's Party has ordered older members to retire from the SPA for health reasons. The current average age of a SPA member is 57. They will be replaced with members in their twenties and thirties. The DPRK reportedly also lowered the education requirements for these new members and is attempting to include more women in the SPA.

GOVERNANCE AND CIVIL SOCIETY: [China-North Korea economic cooperation expected to pick up steam](#), Asahi Shimbun (25 May 2011)

Chinese Premier Wen Jiabao said that the invitation to Kim Jong Il is to show how reform and more open policies can lead to economic development. The reported burial of Agent Orange by US army

angered South Korean and may trigger another debate about SOFA. Mr. Son, CEO of Soft Bank is reported to build around 10 large solar power plants across Japan.

ENERGY SECURITY: [Future regional nuclear fuel cycle cooperation in East Asia: energy security costs and benefits](#), Energy Policy* (23 May 2011)

In an article prepared for the forthcoming Asian Energy Security Special Issue of Energy Policy, David von Hippel and Peter Hayes summarize the development and analysis of four scenarios of nuclear fuel cycle management in East Asia. A scenario in which reprocessing is avoided in favor of dry cask storage of spent fuel resulted in somewhat more uranium use, but offered lower costs and other energy security benefits relative to the other cases.

DETERRENCE: [The nuclear weapons complex as deterrent: challenges and issues](#), Nuclear Weapons Journal (2010) [PDF, 2.25MB]*

Joseph Martz writes that the “ability to reconstitute nuclear weapons as a safer form of deterrence” by maintaining a nuclear weapons complex may “preserve a strategic deterrent to aggression while enabling reductions in nuclear weapon stockpiles” and support a long-term “Global Zero” vision. Until then, a virtual arsenal can help reduce deployed or reserve forces, retain a geopolitical hedge, dissuade nuclear competitors, and reassure allies.

AUSTRAL SECURITY: [Malaysia's carelessness over WMD](#), Asian Sentinel (6 April 2011)

The recent confiscation by Malaysian port authorities of ‘cargo suspected of being related to weapons of mass destruction’ has again raised questions over the country’s non-proliferation strategy. Despite introducing the Strategic Trade Act in 2010, which seeks ‘to codify Malaysian obligations under Security Council Resolution 1540’, the country’s efforts to implement these regulations and tighten export controls have been criticised for being weak and insufficient.

CLIMATE CHANGE ADAPTATION: [Vulnerability to heatwaves and drought: case studies of adaptation to climate change in south-west England](#), Joseph Rowntree Foundation (February 2011) [1.44 MB, PDF]

Magnus Benzie et al. introduce the concept of vulnerability to climate change within the context of social justice. They examine two case studies of adaptation in the south-west of England: the implementation of the national heatwave plan; and the trend towards differential water pricing based on usage. Magnus Benzie et al. highlight the need for a more systematic consideration of current and future vulnerabilities in local, sectoral and national adaptation planning.
