Deterrence: [The Navy is preparing to launch swarm bots out of cannons](#), Patrick Tucker, Defense One (14 April 2015)

Services such as the Navy are developing rocket launchers that fire multiple small drones to swarm, monitor, and attack. Such drones will be more autonomous. Full or even partial autonomy creates new problems for command-and-control, laws of war, and the risk of inadvertent attack that results in immediate and uncontrollable escalation.

DPRK: [North Korea seeking foreign investors after deal with Chinese company](#), Nathan Vanderklippe, The Globe and Mail (13 August 2015)

North Korea finds it nearly impossible to escape China's economic grasp and finds cautious, tentative moves allow North Korean businesses some flexibility in attempting to pursue "parallel development" of economic lines and nuclear program lines. Although Pyongyang's goals in laying landmines were mostly domestic, they are clearly consistent with a campaign approved much higher than the Korean People's Army. In addition to the cross-border tensions raised, the mine laying will result in negative repercussions for an already distressed ecological zone in the DMZ.

GOVERNANCE AND CIVIL SOCIETY: [Abe to include 'apology' in war anniversary statement](#), Asahi Shimbun (11 August 2015)

As the 70th anniversary of the end of World War II approaches, Japan PM Abe is expected to include the word “apology” in a statement after pressure from a coalition partner. Legacies of the war are still strong in the region, with varying truths taught in histories presented by each nation and xenophobia still quite strong in Japan towards ethnic Koreans.

CLIMATE CHANGE ADAPTATION: [Tackling climate change and promoting sustainable development: An action plan for Australia's international engagement](#), Australian Council for International Development (July 2015) [1.07 MB, PDF]

Australia must take action on climate change if it has to play a fair and effective role in reducing poverty and inequality and promoting sustainable development. Moreover, strong international action on climate change is vital to the developing countries and poor communities that are being hardest hit by the impacts of climate change. These impacts are not a far off threat - they are already being felt through sea level rises, increased intensity of tropical cyclones, decreasing crop yields and water shortages. Action on climate change is squarely in Australia's interests, as climate change poses threats to its own quality of life as well as to the prosperity and stability of the region.

Climate Change and Security: [It's not climate change—it's everything change](#), Margaret Attwood, *Matter* (27 July 2015)

Attwood: 'If we fail, we all fail together: we have "just one chance to get it right".'

Marshall: 'Climate-change denial is in fact highly politically astute, well-informed and strategic. Climate change challenges us at almost every level of our identity and forces us to rethink what we assume to be true.'

Robinson: 'As the window to act gets smaller, the likelihood that this action will be hastily implemented increases and this, in turn, will increase the very real human rights risks associated with rapid mitigation action.'

Venezuela: 'The threats to the small island states are the new forms of colonialism.'

The Nautilus Peace and Security Weekly Report presents articles and full length reports each week in six categories: Austral security, nuclear deterrence, energy security, climate change and security, the DPRK, climate change adaptation and governance and civil society. Our team of contributors carefully select items that highlight the links between these themes and the three regions in which our offices are found — North America, Northeast Asia, and the Austral-Asia region.
