DETERRENCE: [The Fifth Element: Enhancing Conventional Deterrence in East Asia](#), Robert Rubel, US Center for Naval War Studies, Information Dissemination, January 26, 2014

Disruption rather than control of a huge littoral area plays to Chinese weakness. It is more expensive for China to counter US disruptive threats than it is for us to pose new ones. Disruption is inherently defensive and less liable to be seen as a prelude to something intolerably offensive.

DPRK: [Illicit: North Korea's Evolving Operations to Earn Hard Currency](#), Sheena Chestnut Greiten, Committee for Human Rights in North Korea, 15 April 2014 [PDF, 841 Kb]

North Korea's Supreme People's Assembly is done and Kim Jong-un was unsurprisingly elected to all the right positions. However, there are strong indicators that almost a decade after the Public Distribution System collapsed, private entities are enriching themselves independent of Kim's control and that this trend is increasing over time. There are concerns that North Korea may test a new nuclear device in the near future - possibly even during President Obama's visit to Asia. Should that happen, the chances of any serious direct negotiations with North Korea asymptotically approach zero until there is a new U.S. president.

**GOVERNANCE AND CIVIL SOCIETY: [Confucian Guilt](#)
[Spreads in Korea](#), Kim Sung-tak and Kim Ki-hwan, Joongang Ilbo, 23 April
2014**

Public outrage and guilt have followed the sinking of a ROK passenger ferry last week, focusing on close ties between inspection agencies and companies, lax enforcement of standards and inadequate training. Expectedly, the tragedy has led the government to pledge reviews of safety and response measures; interestingly, however, public sentiment has also focused on the failure of the older generation in creating a safe world for younger generations.

CLIMATE CHANGE ADAPTATION: [Location Security and Environmental-Induced Displacement: A Case Study of the Riverine Islands in Bangladesh](#), Brad K. Blitz, vol. 29, no. 2, Refuge, 2014 [174 KB, PDF]

There is a diverse body of relevant writing on the themes of location and human security, vulnerability, migration, and climate change. Much of it concentrates on recent policy developments and bears the marks of different disciplinary and sectoral approaches. While the term 'location security' does not feature in this body of writing, it is inferred in wider studies of human security that have sought to inject research on livelihoods and capabilities into a multi-sectoral development framework.

ENERGY SECURITY: [Behind a Real-Estate Empire, Ties to India's Gandhi Dynasty](#), Geeta Anand and Rajesh Roy, Wall Street Journal (17 April 2014)

Most renewable energy depends on land and/or water, competing with forests and crops, much more so (in \$ per useful energy delivered) than fossil energy. People with right contacts will manage to get cheap enough land and lucrative enough power sales contracts to become filthy rich in the name of clean energy, creating more destitution in the name of saving the planet. Landed gentry, financiers, and crooks gain.

The Nautilus Peace and Security Weekly Report presents articles and full length reports each week in six categories: Austral security, nuclear deterrence, energy security, climate change and security, the DPRK, climate change adaptation and governance and civil society. Our team of contributors carefully select items that highlight the links between these themes and the three regions in which our offices are found—North America, Northeast Asia, and the Austral-Asia region.
